

DIY BIRD SILHOUETTES

There is nothing quite so distressing and headache-inducing for our feathered friends than when their flight paths unintentionally collide with a window or patio door. This simple silhouette will deter birds from these unfortunate accidents, whilst also adding a nice decorative touch to your windows this summer.

Step 1

Print out this ready-made stencil and cut around the bird silhouette.

Step 2

Trace around the bird stencil onto black card/paper. Ensure you trace several as the greater the surface area you can cover, the more effective your deterrent will be.

Step 3

Carefully cut out each silhouette.

Step 4

Add some tape or Blu-Tac to the back of your bird silhouettes and place them along the window.

TIPS:

- Make this activity even more wildlife-friendly by reusing paper or card from old magazines or cereal boxes, as long as it is relatively dark.
- Try to place some silhouettes at eye-level.
